SUMMARY

Professional with high interest in continuous learning and growth. Looking forward to working and growing alongside the company's goals, putting all my frontend and backend knowledge at disposal to achieve the best possible results. Currently focused on enhancing my backend skills.

EXPERIENCE

Software Developer

07/2024 - Present

Allways Forwarding

Santo Domingo,
Dominican Republic

Working as a software developer on a fast phased environment delivering optimal solutions in a timely manner. Developing a shipments and purchase orders management system to handle import-export logistics abroad.

- Implemented client's requirements in a timely manner.
- Focused on delivering optimized solutions that works long term.
- Refactored code to enhance readability, scalability and maintainability.
- Created a chat system to enable communication between our logistic employees, customers and suppliers.

PERSONAL PROJECTS

E-commerce website

App that resembles a typical shopping app using Firebase to track different users and garments data and a cart feature. Mainly created to test my React Redux and Firebase knowledge.

Cloth/Face recognition app

App able to recognize faces or garments using an API and highlights them. Mainly created to interact with an API that uses AI for recognition.

Inventory App

Track the current inventory and update it every time we report a sale or a purchase.
